# About SafaPond Direct Ltd

The SafaDeck™ Grid System with its unique triangular patterned design

product, unrivalled service and excellent value for money.

In 1998 the SafaDeck™ pond safety grid - the world's first modular safety grid to guard against the dangers of drowning in garden ponds was invented. After 3 years of further development and testing the SafaDeck™ went on general sale in 2001.

Previous customers of the SafaDeck™ include schools, nurseries, hotels, holiday villages, carers and not forgetting the thousands of families who've recognised the need to protect their children before an accident happens.

**For more information on SafaPond Direct Ltd and the SafaDeck™ visit our website:**

Safapond Direct Ltd is a UK based organisation providing safety solutions for the owners of garden ponds across Europe.

We have built an international reputation by offering clients an effective

## Pond Safety

SafaPond Direct Ltd are here to promote an effective solution to the dangers of garden ponds. Not only have too many children drowned in unprotected ponds, but the long term effect of permanently brain damaged children are also most distressing.

The SafaDeck™ pond safety grid system will guard against these tragedies meaning you can now retain your pond, whilst keeping your children safe. You will also benefit by helping protect pets from accidents and koi from heron attack.

Since 2001, the SafaDeck™ pond safety grid system has made thousands of ponds safe - this means thousands of children can play happily in their gardens, safe in the knowledge that their water feature doesn't present the danger it once did.

The SafaDeck™ - strong but discreet

## How the SafaDeck™ works

The patented SafaDeck™ pond cover comprises of grid panels made from glass reinforced polymer for superb strength.

These grids are clipped into place on black powder coated aluminium beams.

The beams are supported by legs which have specially designed feet so that they can be used safely in lined ponds.

Different fixings enable the system to be safely secured to any type of pond edge.

The beams and grid panels can be easily cut to shape and specially designed components are fitted to protect pond liners from any cut sections.

Grids can be removed from the pond by detaching the childproof retaining clips. This means that access is gained into the pond without having to remove the whole structure.

**If you have any questions about the SafaDeck™, how it is installed or would like a free, customised, no-obligation quotation for your pond, please do not hesitate to contact us.**
