- *DIY or installed*
- *UK manufactured*
- *Always in stock*
- *Next day despatch*
- *The professional's choice*

*The SafaDeck™
Designed with children in mind*

About the SafaDeck™

In 1998 the SafaDeck™ safety grid system for ponds - the world's first modular safety grid to guard against the dangers of drowning in garden ponds - was invented. After 3 years of further development and testing the SafaDeck™ went on general sale in 2001.

The SafaDeck™ has been designed to be straight forward to install. The DIY option accounts for over 50% of the SafaDecks sold worldwide. Constant innovation, such as screw adjustable height adjustment and liner friendly feet mean that the SafaDeck™ is consistently chosen by "DIYers" and professional installers alike as a quality, cost effective safety solution for ponds.

Previous customers of the SafaDeck™ include schools, nurseries, hotels, holiday villages, carers and not forgetting the thousands of families who've recognised the need to protect their children before an accident happens.

Pond Safety

The company behind the SafaDeck was founded to promote an effective solution to the dangers of garden ponds. Not only have too many children drowned in unprotected ponds, but the long term effect of permanently brain damaged children are also most distressing.

The SafaDeck™ pond safety grid system will guard against these tragedies meaning you can now retain your pond, whilst keeping your children safe. You will also benefit by helping protect pets from accidents and koi from heron attack.

Since 2001, the SafaDeck™ pond safety grid system has made thousands of ponds safe - this means thousands of children can play happily in their gardens, safe in the knowledge that water features do not present the danger they once did.

The SafaDeck™ - strong but discreet

How the SafaDeck™ works

The patented SafaDeck™ pond cover comprises of grid panels made from glass reinforced polymer for superb strength.

These grids are clipped into place on black powder coated aluminium beams.

The beams are supported by legs which have specially designed feet so that they can be used safely in lined ponds.

Different fixings enable the system to be safely secured to any type of pond edge.

The beams and grid panels can be easily cut to shape and specially designed components are fitted to protect pond liners from any cut sections.

Grids can be removed from the pond by detaching the childproof retaining clips. This means that access to the pond for cleaning, maintenance etc is gained with relative ease and without having to remove the whole structure.

Further information

If you have any questions about the SafaDeck™, how it is installed or would like a free, customised, no-obligation quotation for your pond, please do not hesitate to contact your local distributor:
